

TOTO HIGH EFFICIENCY COMMERCIAL TOILETS:
Optimum Water Conservation for Commercial Environments.

Preserve the environment. Protect your bottom line.

As the world's largest plumbing fixtures manufacturer, we understand that conserving water is good for the environment. As a professional involved in the design, construction or maintenance of commercial buildings, you know that saving water means saving money. Reduced water consumption can save thousands of dollars a month, depending on the size and water usage of the building.

A TOTO 1.28 GPF toilet can save...
20% more water than a 1.6 GPF toilet
63% more water than a 3.5 GPF toilet

Our 1.28 GPF High Efficiency Toilets (HETs), 0.5 GPF High Efficiency Urinals (HEUs) and our EcoPower® 1.28 GPF and 0.5 GPF sensor flushometer valves (EFVs) are system engineered to work together to provide optimal performance and water savings.

TOTO HETs, HEUs and EFVs help to save money in commercial environments by providing unsurpassed performance and reliability that reduces maintenance costs. Our new high efficiency, high performance toilets are engineered to help to earn one credit in the US Green Building Council's green LEED building rating system, directly contributing to the efficient operation of sustainable, high performance buildings.

TOTO HETs and HEUs (and EcoPower Faucets) can achieve a 30% reduction over baseline water use in commercial buildings in the LEED program.

TOTO 1.28 GPF HETs and 0.5 GPF HEUs can help earn one LEED Credit.
